

FOREWORD

This book started with a curious question from my now four-year-old son:

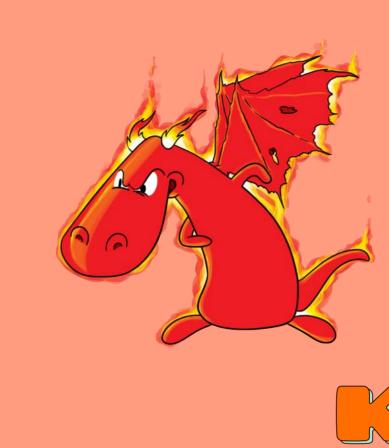

What is fire?

Curious questions by curious kids often provide problematic moments for proud parents. How do you explain something so intricate and complicated — yet so commonplace – to a young child?

The story that follows was my attempt to explain fire in terms that a young child could grasp. At the office, we have started calling these stories "21st Century Fairy Tales."

We're hoping this science-based fairy tale, or 21st Century Fairy Tale, inspires young kids to ask more curious questions about the interesting environment around them, and to better comprehend the principles on a much deeper level when they come in contact with them again later in life.

I hope you enjoy. Peter Galante

Where did fire come from, and what's it used for? Read along with this book, and you'll find out!

"Stand back," said Dad.

"Dad, fire is scary!" said Timmy. "I don't like fire."

"Fire can be scary and dangerous, so you have to be careful..."

"But fire is important.
We use it for many things.

"Have I told you the story of how people mastered fire?" asked Dad.

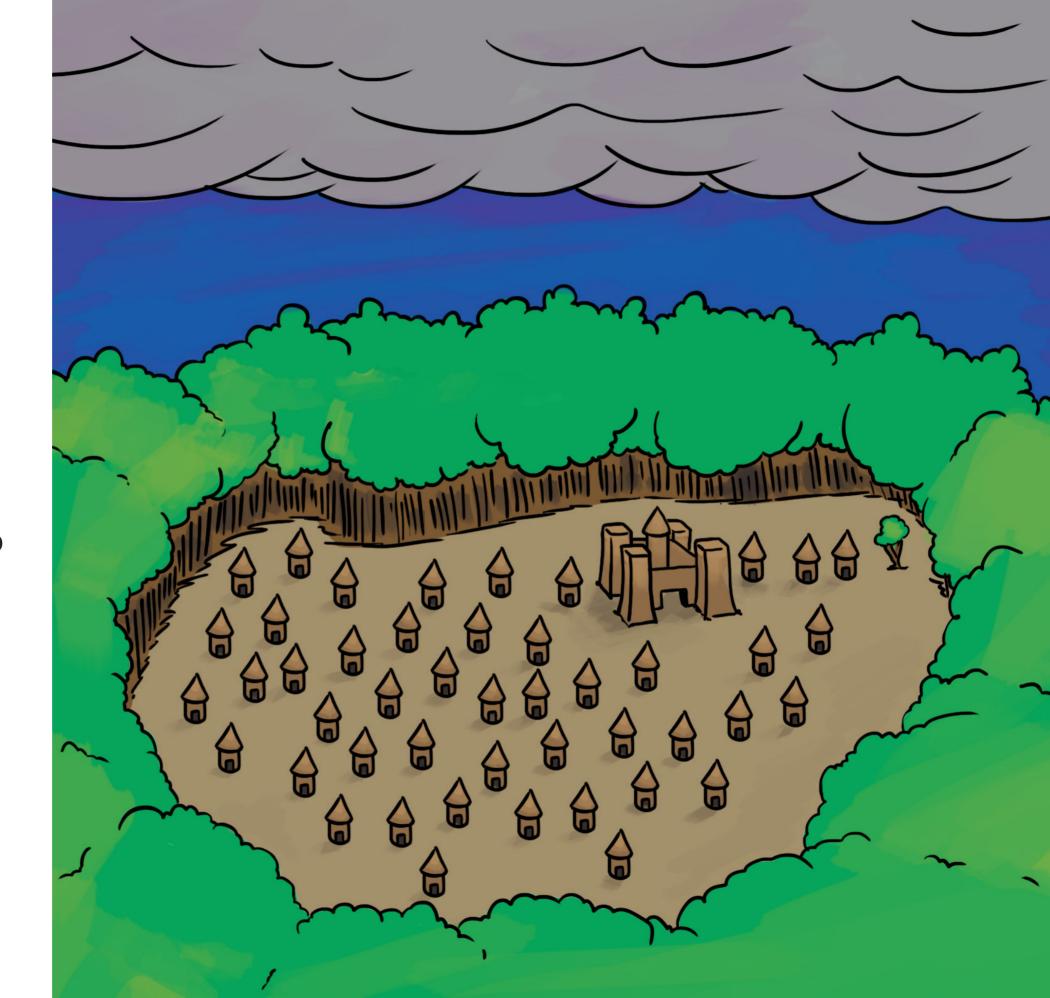

"No," said Timmy.

"Well ..." started Dad,

Once upon a time long ago, people lived in wooden houses without electricity.

That means they
had no lights, so it
was dark at night.
There were no
TVs, no phones, no
computers, and no
iPads. When the
sun went down, it
was dark and cold.

One day, there
was a loud boom
in the sky!
A bright flash
followed, and
a teeny-tiny fire
dragon appeared.

The fire dragon was very hot and glowed in the dark!

And the fire dragon was very hungry! It started to eat the tree!

Once a fire dragon starts to eat...

They will eat and eat... until everything is gone!

Crackle, snapple, pop

is the sound of a fire dragon crunching and munching on wood, its favorite food.

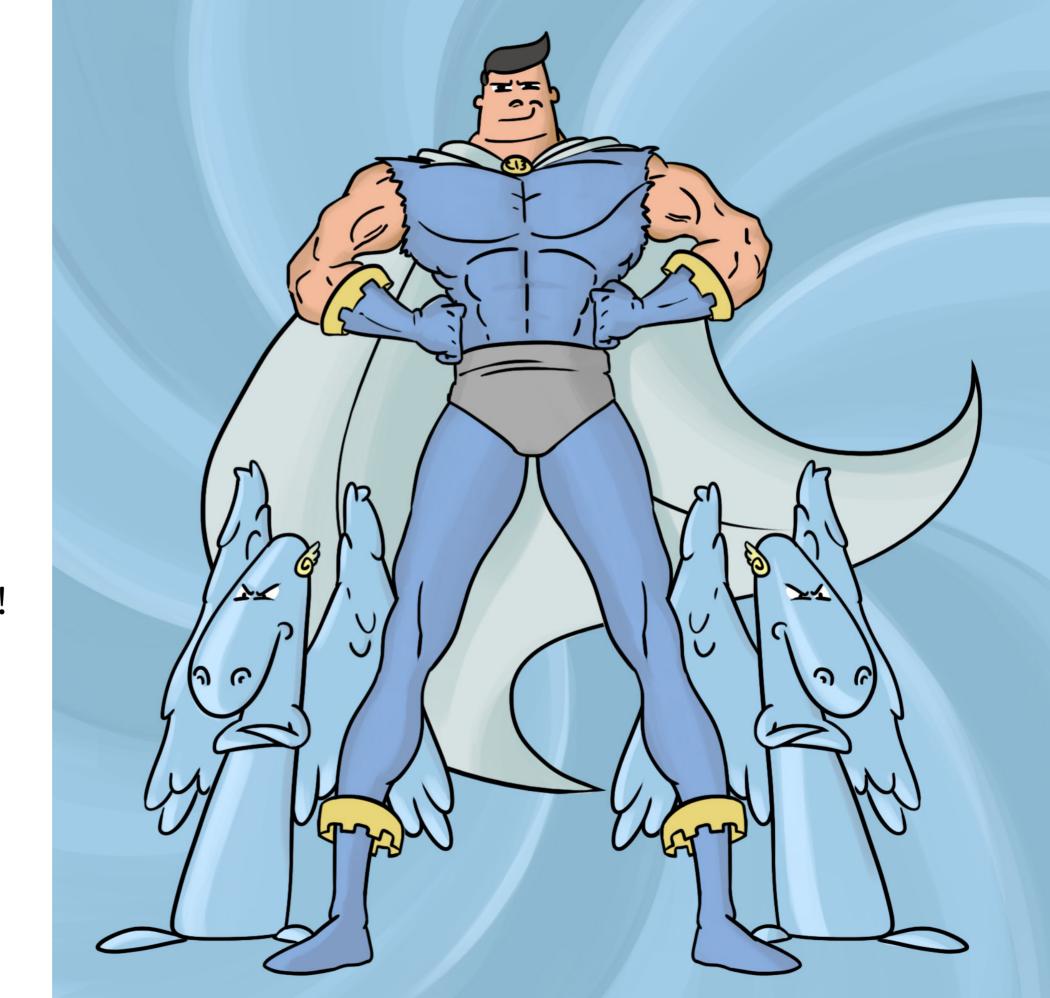

The villagers
had never seen
a fire dragon.
At first they were
curious, but then
it started eating
one of the houses!

The villagers
were very scared,
and they sounded
the alarm!

They called their strongest hero: Venti, master of wind dragons. Venti protects the village with his two powerful wind dragons, North and South!

The wind dragons always win.

They huffed and they puffed with all of their might!

What do you think happened?

The fire dragon grew bigger and bigger with each huff and puff! Fire dragons love wind because it gives them the extra power.

Next they called Lord Loggy, master of wood dragons. Lord Loggy protects the village with his powerful wood dragon, Timber.

Lord Loggy
flung the wood
dragon at the
fire dragon.

The wood dragon hit the fire dragon in the chest with all of his power!

What do you think happened?

The fire dragon had grown big and was still hungry!

The fire dragon gobbled him up, and grew bigger and bigger!
And burned hotter and hotter!

Crackle, snapple, pop

as the fire dragon's flames rose towards the sky.

With their best heroes defeated, the villagers ran.

Could anything stop the fire dragon?

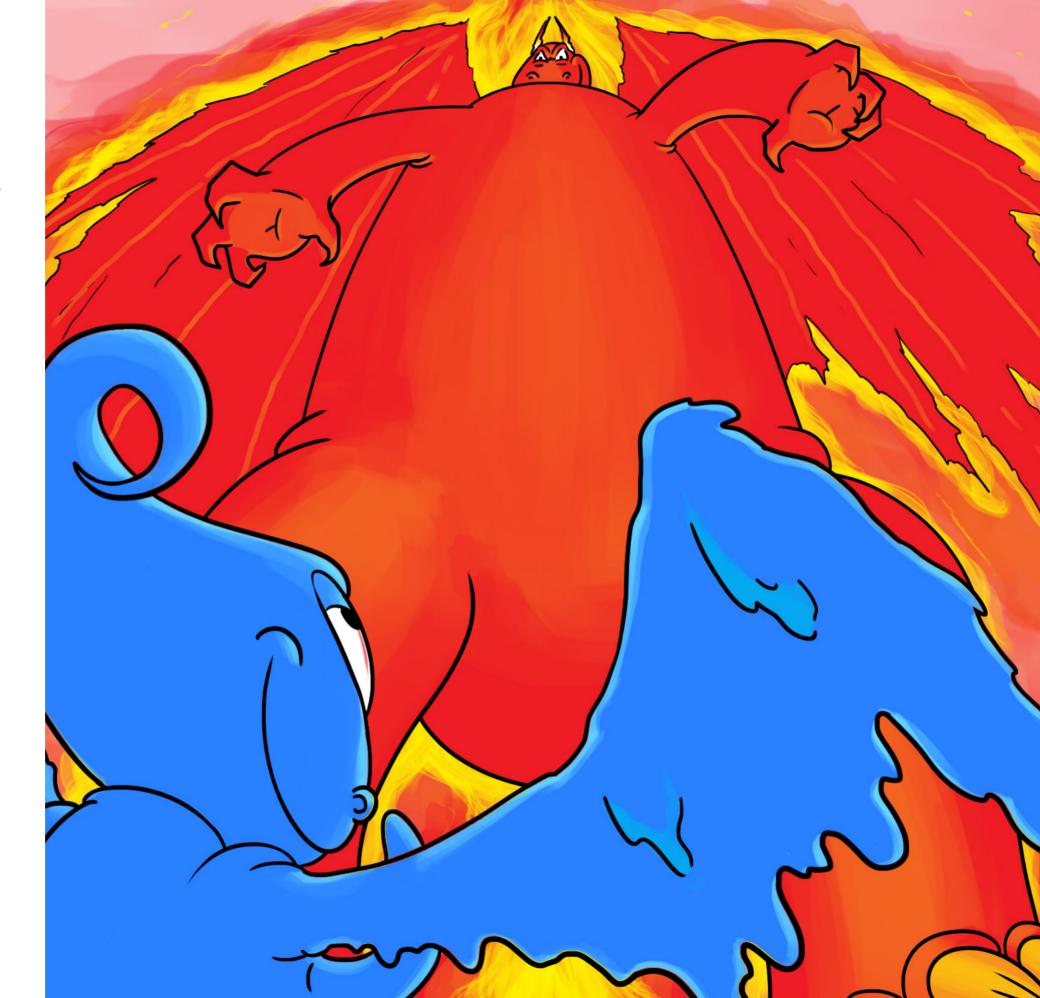

There was only one dragon left:
A teeny-tiny, pinky-ponky water dragon, and his young master.

His master threw the tiny water dragon at the big, bad fire dragon, and ...

The teeny-tiny, pinky-ponky water dragon flew at the tall, towering fire dragon.

What do you think happened?

Hiss-sviss-fiss!

The fire dragon's leg turned into white smoke.

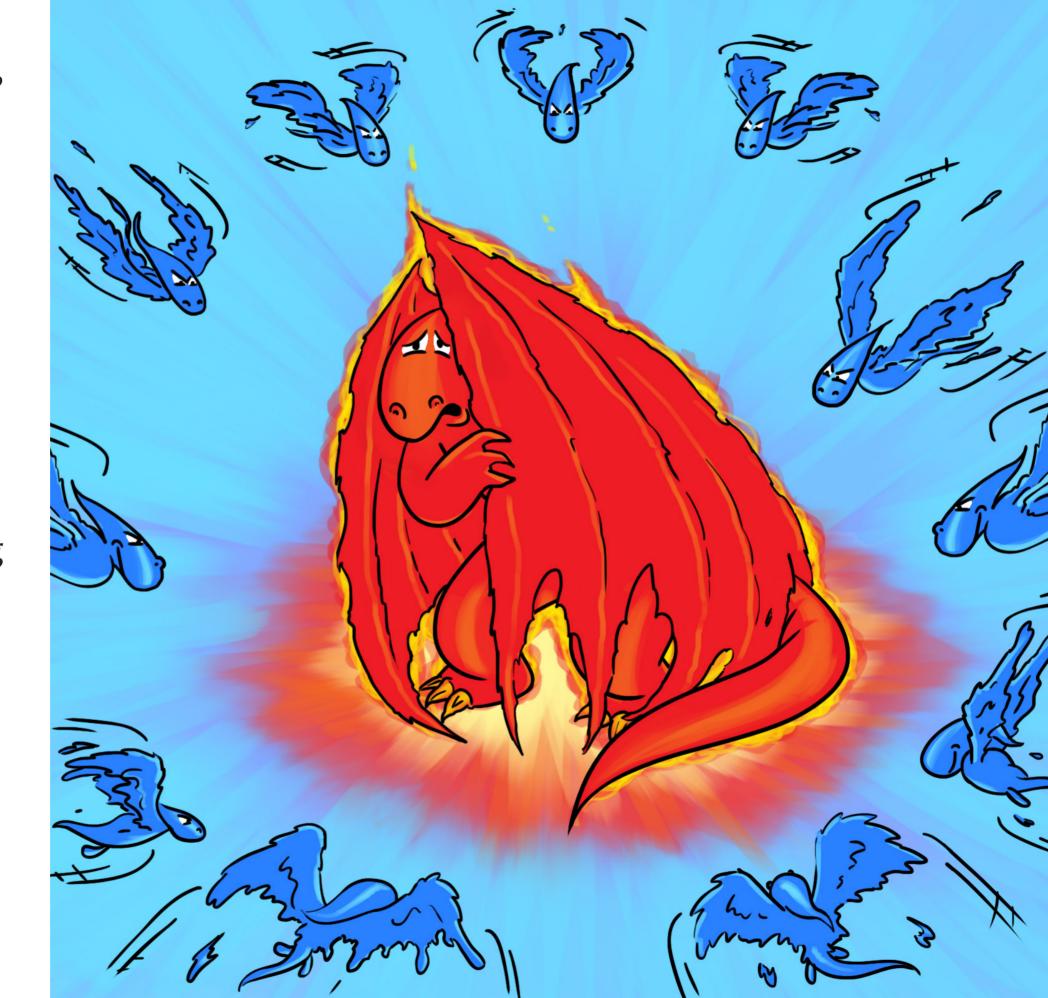

The fire dragon roared as his leg vanished and the white smoke rose into the sky.

Many teeny-tiny, pinky-ponky water dragons flew at the fire dragon.

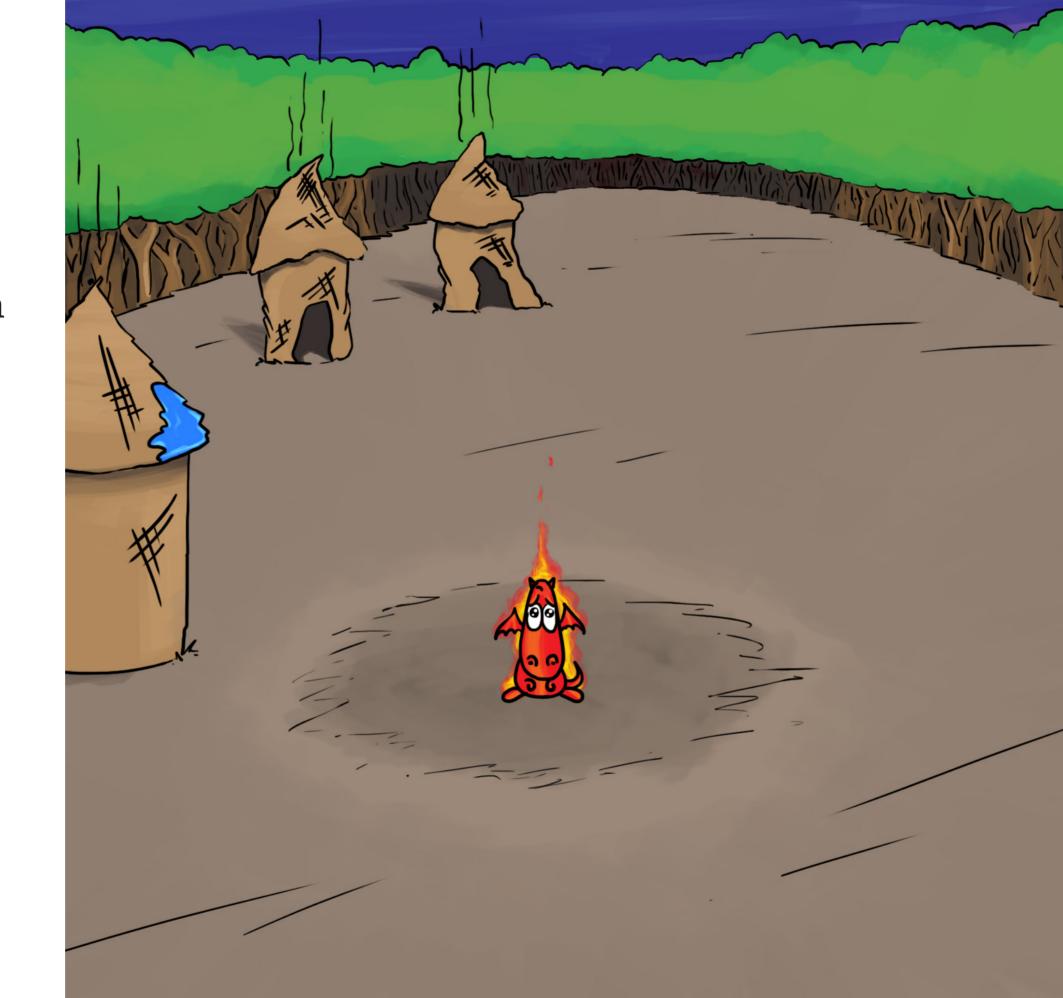

Hiss-sviss-fiss!

Each one making him smaller and smaller.

Smaller and smaller...
until he was a teeny-tiny, itsybitsy fire dragon once again.

The fire dragon caused a lot of damage, but the villagers saw great possibility in his power.

The fire dragon was the perfect size for the villagers to control.

They fed him his favorite food:
wooden sticks
but just enough.

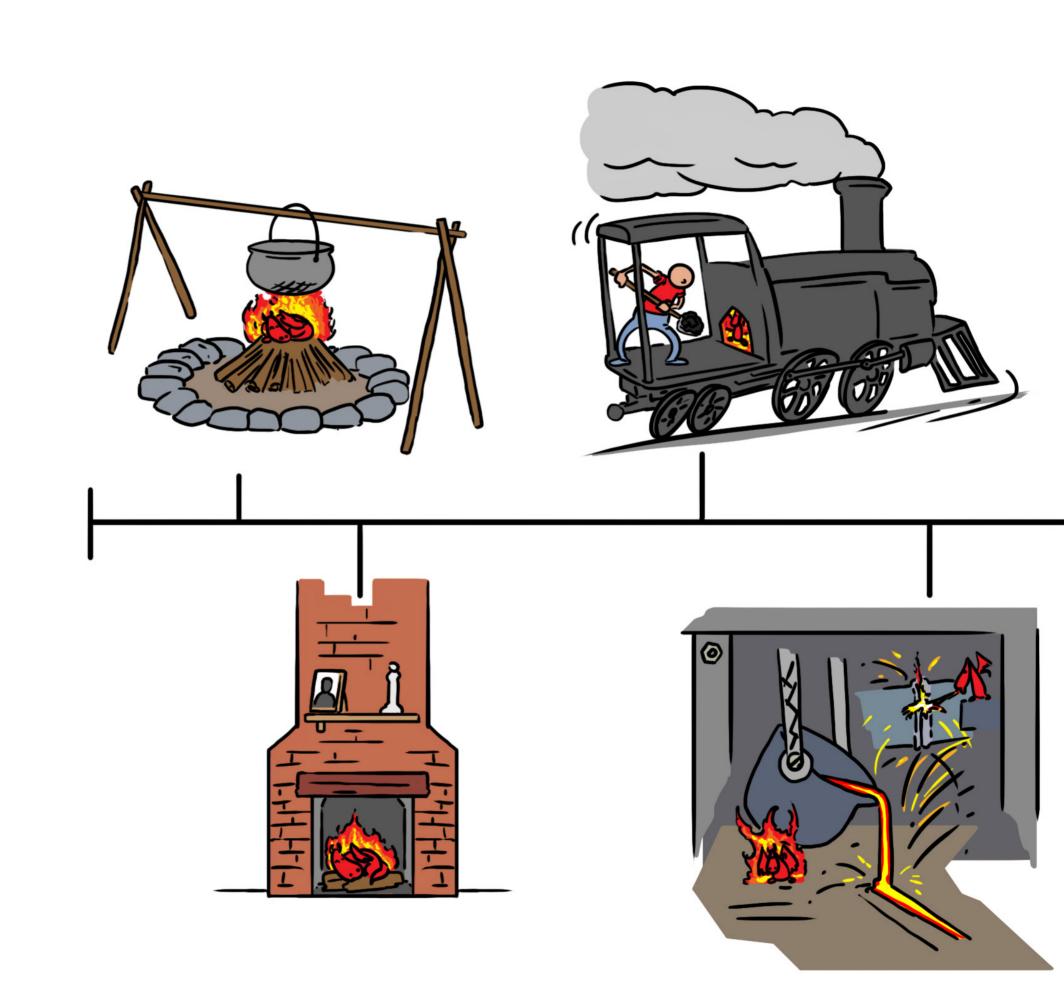

The fire dragon gave the villagers heat in the cold and light in the dark.

As time went by, we became better and better at controlling these fire dragons.

We used them for cooking food, heat for the cold, light in the dark, transportation, making metal, and much more!

Fire dragons are very powerful and helpful when controlled.

"And that is
the story of how
people tamed the
fire dragon and
were able to
master fire."

Remember,
fire dragons
are useful when
controlled, but...

You have to be careful! They can grow big and strong very fast! They can do a lot of damage when they're big and dangerous.

So be careful!

The Fire Dragon

The fire dragon grows larger and stronger the more he eats. The villagers learn to master the fire dragon.

The Water Dragon

The pinky-ponky water dragon is still in training, but he is the strongest against the fire dragon.

The Wind Dragon

The wind dragon is stronger than the water and wood dragon, but is weak against the fire dragon.

The Wood Dragon

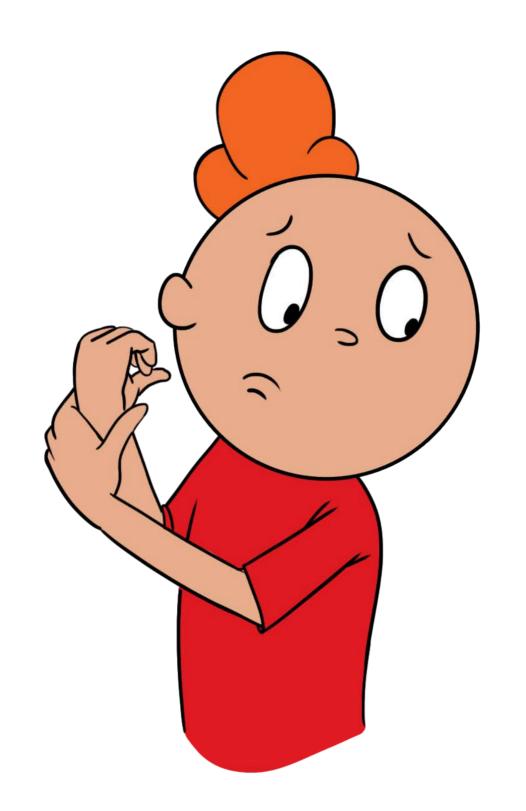

A strong and sturdy dragon, he grows stronger when he works with his friend the water dragon. SAFETY PROCEDURES FOR KIDS

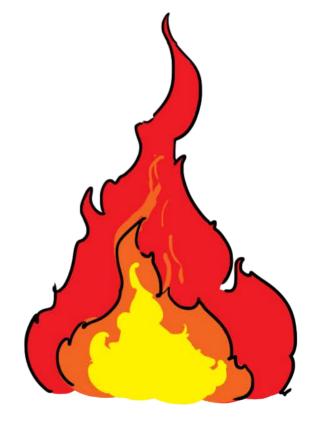

SAFETY VS FIRE

Be careful.

Fire is very
hot, and it will
burn you if you get
too close.

Parents, be sure to check your smoke alarms regularly.
Also, be sure to practice fire evacuation and proper fire protocol with your children.

If you see a fire:

STAY AWAY
AND NOTIFY
AN ADULT
IMMEDIATELY.

If you are alone, get far away from the fire. Get out of the building if you are inside.

Do not take anything, just go!

Once outside, find an adult or call 911.

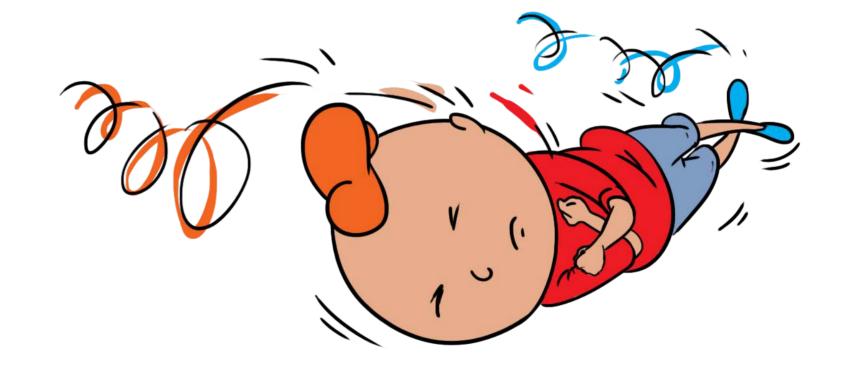

If you or your clothes catch on fire, remember:

STOP!

DROP!

ROLL!

Practice this and say the steps aloud while you do it!

If you are inside and there is a fire, remember these important points:

- Smoke rises, so make sure you stay low to the ground.
- If you see smoke coming through a door, do not use that door. If you do not see smoke, put the back of your hand against the door itself to see if it is warm. Do not grab the handle first, as it can be hot if there is a fire behind the door.
- If the door is cool, open it very slowly. If there is no fire, you may go through. If there is a fire, shut the door again.

If you are trapped in a room:

- If you are on the first floor, look for a window to escape through!
- If you are not on the first floor, stay calm. HELP IS COMING!
- Keep the door closed, and do your best to cover all openings into the room. Use clothes or anything you can find to fill the cracks above and below the door and any air vents into the room. If there is a window in the room, look out of it for the fire truck. DO NOT OPEN IT UNTIL THEY ARRIVE! As soon as you see them, open the window and start screaming and shouting as loud as you can. Do not open the window earlier. Remember the fire loves wind and fresh air. So if you open the window, the fire will find you!

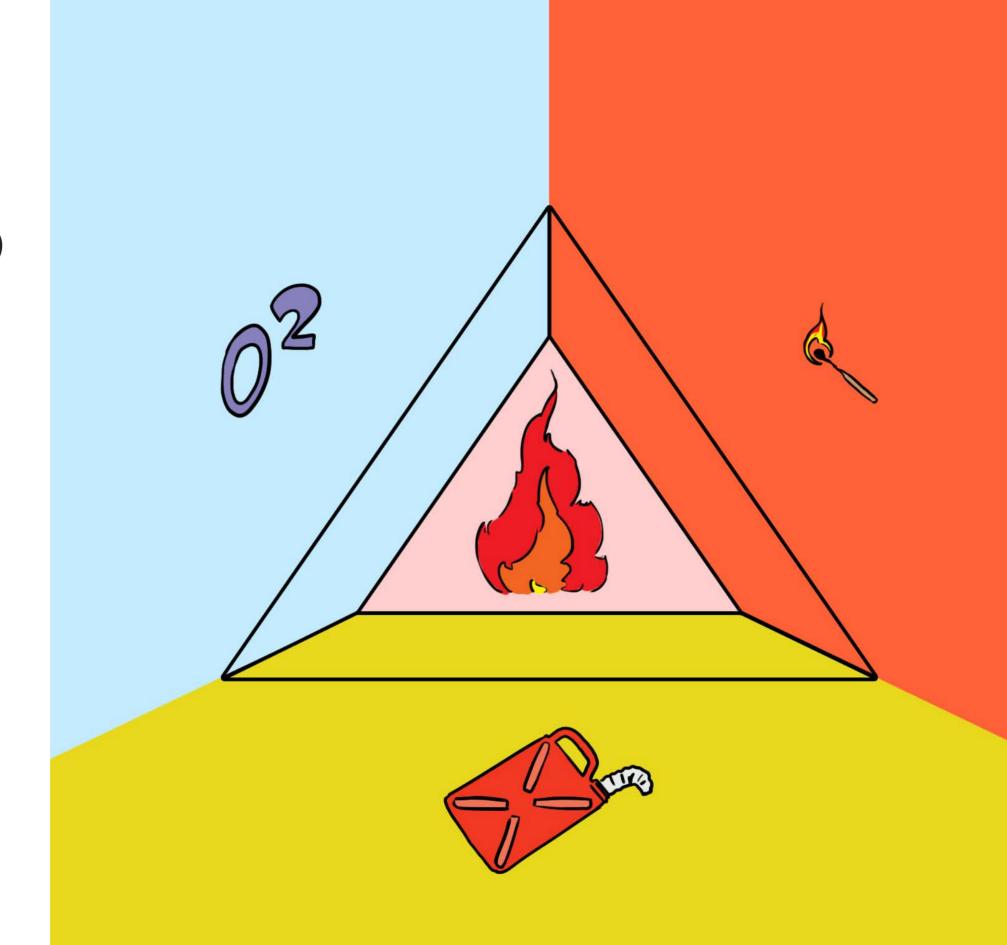

CONCEPT EXPLANATION FOR PARENTS

PARENTS VS FIRE

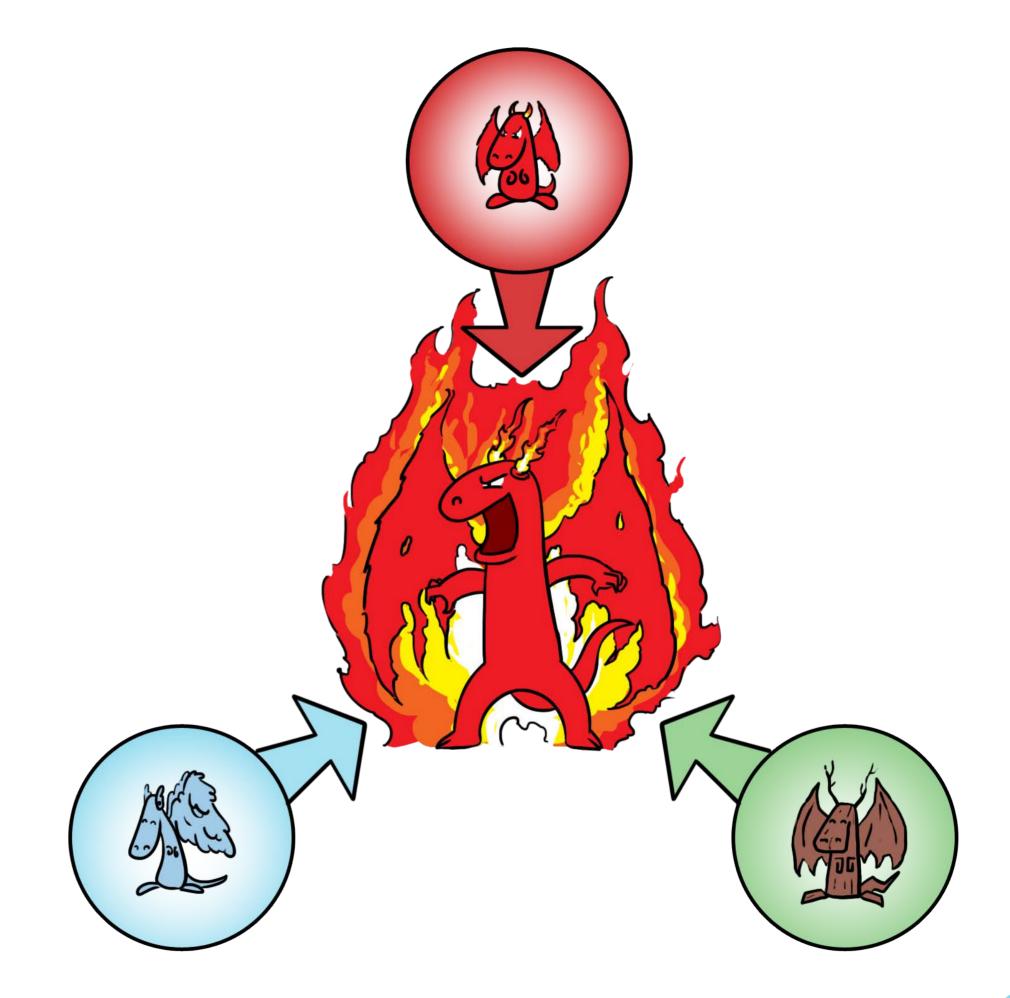

Fire needs three things:

- Ignition source
- Fuel (wood, etc...)
- Oxygen

Take any one away, and the fire will be extinguished.

In the story, the lightning was the ignition source, and the wood the fuel source. The wind dragon added oxygen, as the wood dragon added fuel making the fire dragon grow.

There are several ways to put out fires.

- Call a professional Fire extinguisher
- Water Smothering

Some methods will work better on different types of fires and not at all on others.

ELECTRICAL FIRES

Switch off the appliance and pull out the plug. Smother the fire with a blanket or use a Type C extinguisher. Do not use water, because water conducts electricity and can electrocute you.

COOKING FIRES

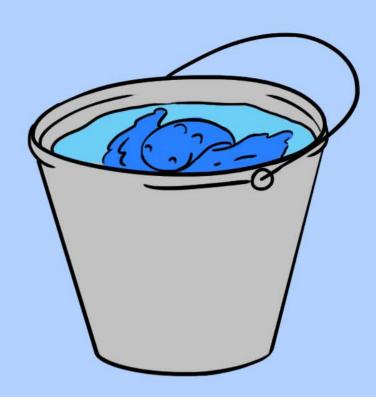

Turn off the stove or oven, then smother the fire with the pan lid or baking soda, or use a Type B fire extinguisher. If it is in the oven, turn off the oven and leave the door closed until the fire is smothered. Never move the pan. It can fan the fire or splatter grease. Never turn on the exhaust fan or use water. The fan will draw the flames into a concealed space.

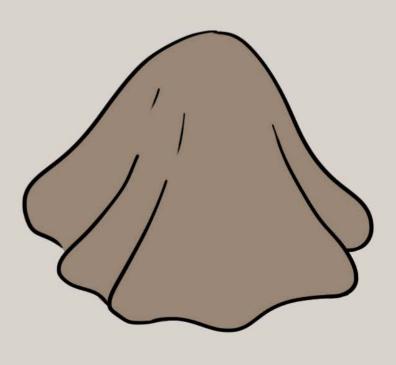

GAS FIRES

Shut off the gas supply. Smother it with a rug or blanket, or use a Type B fire extinguisher or water. Ventilate the area to let out the gases. Call the fire department to have the area pipes checked for further hazards. Then call the gas company. If there is a gas fire, it may be better to let the gas burn rather than extinguish the fire, which would let the gas fill the room or house creating the potential for an explosion. In the case of a gas fire, then, remember the most critical part is getting the gas supply turned off.

The two main causes of fire are nature and people.

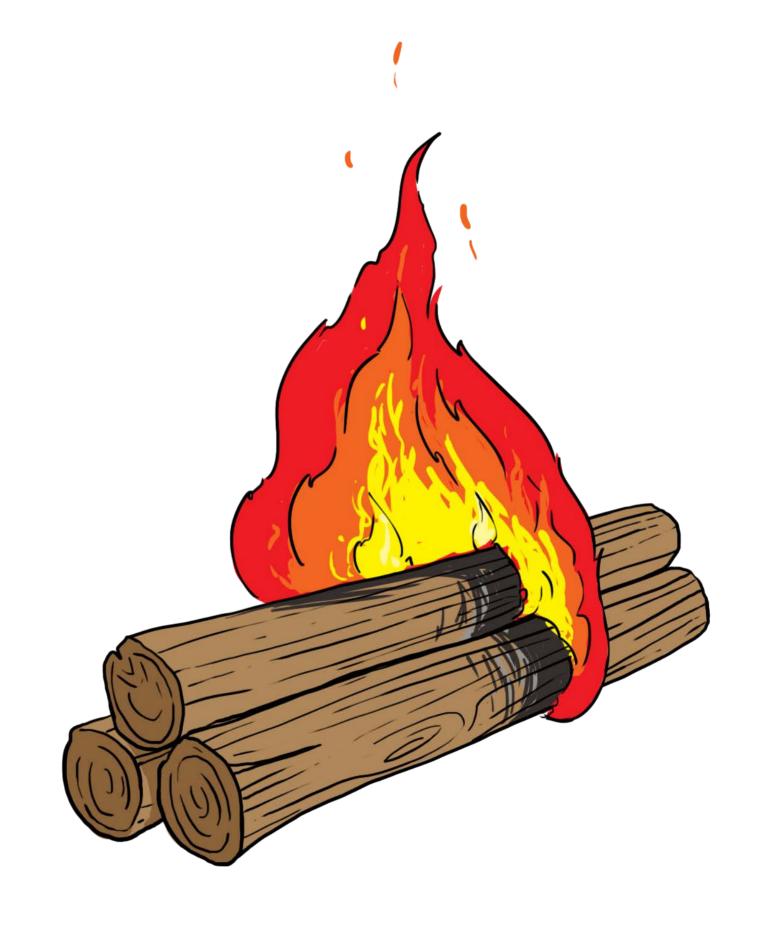

Be sure to teach your children proper fire safety from a young age to help prevent fires.

Fire is a by-product of a chemical reaction called *oxidation*.

Oxidation is simply changing the Oxygen state of a chemical. A really common example is rusting metal. In order for fire to be created this process must occur rapidly. When a fire is ignited more complex molecules contained in the fuel are broken down into their individual or smaller parts, and then these chemical molecules or atoms are bonded with oxygen atoms.

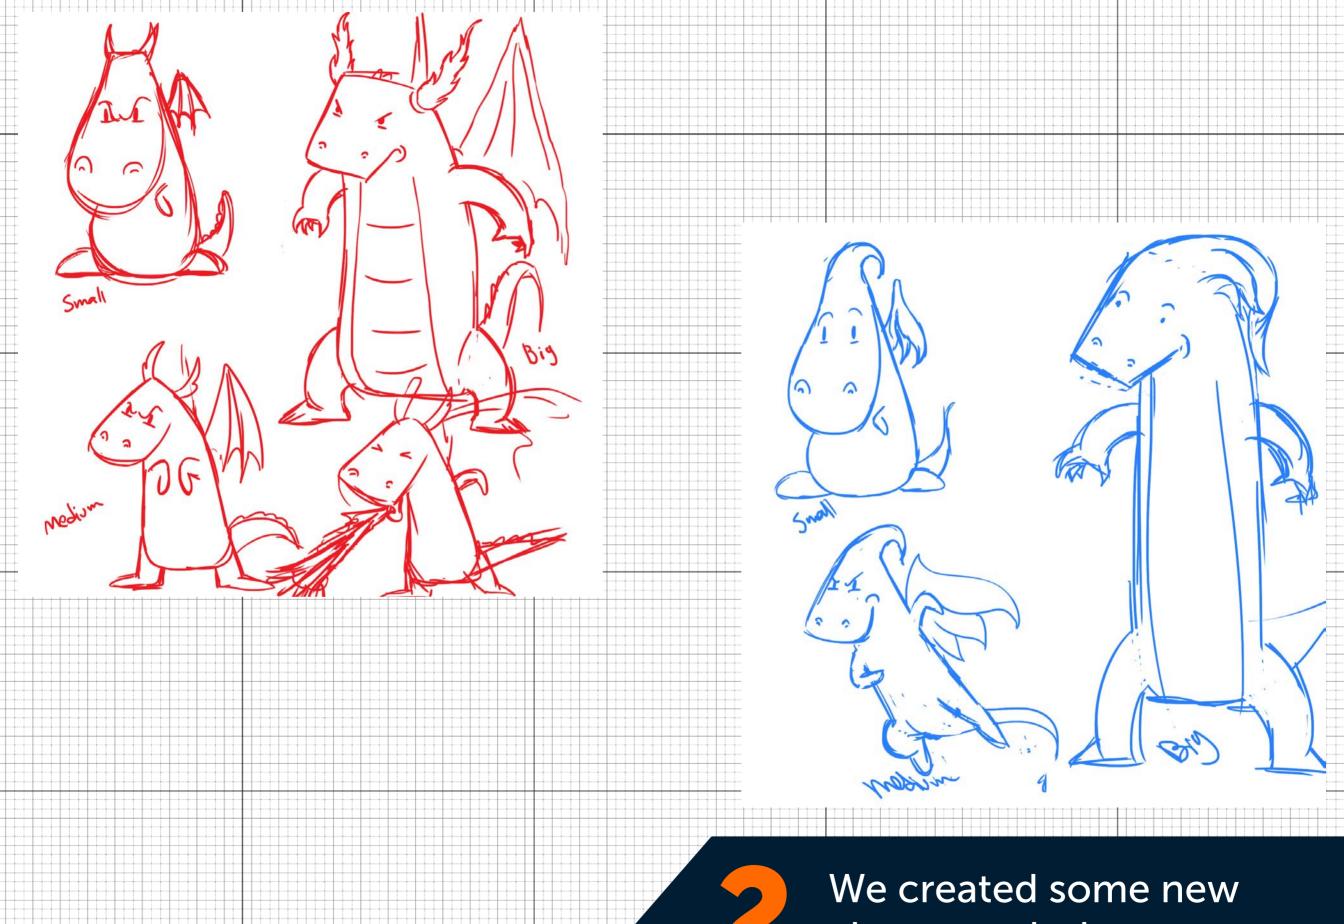

Oxygen is a critical part of this chemical reaction, and that is why smothering a fire will extinguish it.
This is why oxygen is needed for a fire.

BEHIND THE SCENES

THE MAKING OF KIDS VS FIRE

character designs

We picked our favorites, and created the story!
